

DORAY MAKES KEY APPOINTMENT TO ADVANCE ANDY WELL GOLD PROJECT

Doray Minerals Limited (ASX: DRM, Doray) is pleased to announce that, following further high-grade results from its Andy Well gold project, the company has appointed Mr Mark Cossom as Geology Manager to advance the project towards potential development.

Mark has over 13 years experience in exploration, resource development and open pit and underground mine production and management in both Australia and Papua New Guinea. His most recent role was as Harmony's Principal Geologist SE Asia, part of the technical team overseeing exploration activities in PNG, including the start-up of Harmony Gold (PNG) Exploration Ltd, and the recent discovery of extensions to the world class Golpu deposit

Prior to that Mark was involved in several operational and development roles, as well as leading feasibility teams in the development and start-up of several open pit gold mines at Harmony's South Kalgoorlie Mines, where he rose to the position of Geology Manager.

According to Doray's Managing Director, Allan Kelly, "Mark brings extensive gold project development and production experience to Doray and will be a great asset to the company. Mark will initially be tasked with progressing the Andy Well gold project towards potential development."

"This is an important milestone for Doray and displays the company's commitment to advancing the Andy Well project, which has the potential to contain a significant global gold resource. Doray welcomes Mark to the company and looks forward to his contribution."

About Doray Minerals Ltd

Doray Minerals Limited (ASX: DRM) was established in August 2009 and listed on the ASX in February 2010, following a successful IPO. Doray is currently focused on exploring for large economic gold deposits in two of Australia's under-explored gold provinces: the Murchison Region of WA and the Central Gawler Gold Province in South Australia.

In March 2010, Doray announced the discovery of the very high-grade Wilber Lode at Andy Well with its maiden drill programme. The Wilber Lode is one of a number of NE-trending mineralised zones at Andy Well currently being explored by Doray.
